Supported drawing file formats: DXF, DWG, DGN, PDF, TIFF, EPS, IEC6 and DWG. Visual LISP Visual LISP is an application programming interface used by AutoCAD that allows programmers to extend the capabilities of the software. For example, Visual LISP is used to create custom user interfaces or in conjunction with AutoLISP, it is used to manipulate AutoCAD's drawing objects. This function is described in the official documentation. .NET .NET is an application programming interface designed to work with AutoCAD drawing files. AutoCAD supports the .NET Framework version 2.0 and later and has a .NET plugin installed by default. The .NET framework supports user-defined types, which are defined as a pair of the type-name and the class-name. For example, the object IDrawing is a type-name and Drawing is a class-name. The programmer can extend types by defining new classes for the types. The code can be written in a class library. ObjectARX ObjectARX is an add-on that can work on AutoCAD drawings. A programmer can access the AutoCAD drawing data, manipulate it and create new drawing objects. ObjectARX is a C++ class library. Drawing extensions Other than the Autodesk Exchange Apps, AutoCAD also supports extension points: AutoCAD Extension Points: These extension points allow customizing AutoCAD drawing functionality without writing code. The extension points are stored in the drawing file and can be accessed with the Extentions class. AutoLISP extension points: These extension points are used to extend AutoLISP with custom functions. VBA extension points: These extension points allow a user to add custom functions using Visual Basic for Applications. Plugins: Autodesk Exchange Apps are plugins available on Autodesk Exchange. Autodesk Exchange Apps can be installed on AutoCAD and are extensions that can be made available for other Autodesk software applications, like those mentioned above. Batches A batch is a set of drawings or commands that can be executed using one or multiple programmatic or graphical interfaces. Batches can also be saved to disk. The script for executing a batch is saved as a Batch program. Custom functions A custom function is a function that can be added to the AutoCAD drawing data. For example ca3fb1094
