Anti-Theft is the company's name for its solution to hardware theft. The full-disk encryption feature is part of the new Intel chipset family, and several products will ship with it. Passwords for a computer user can be cracked fairly easily.Q: asp.net MVC and IIS: redirect after login (with a route) I have an MVC webapplication (asp.net) and a login for an admin user. The request is redirected to the login form if there isn't a session. The problem is that i have a route @Url.Content("~/Admin") and i want it to redirect me to admin.aspx after the login. With forms authentication the request gets the login page and then it gets redirected to the admin page. In that page i have a login action. If the login is wrong it returns a login failed url in the loginaction. How can i do this with asp.net mvc? A: You have two options: Use the forms authentication route and create your own

custom controller action to redirect to the correct URL, a "normal" MVC action actually is not the right place. Create a custom AuthorizeAttribute that redirects to the correct URL. Custom Authorize Attribute Normally you'd have a single global AuthorizeAttribute that only adds the [Authorize] attribute to controllers etc. (see here). This attribute checks the role of the user and redirects accordingly. You can create your own custom Attribute, pretty easy with the naming of the actions, more details on my blog: There are some disadvantages on this approach: you always have to check the role and the users session cookie. But in most cases those two just work fine together. Q: Zend Studio Plugin I'm not quite sure how to phrase my question, so please bear with me. I am trying to create a new plugin for Zend Studio that will provide the ability to extend Zend_Tool_Framework from the IDE itself. The benefit to me would be that I would be able to keep both the IDE and the Zend Framework installed at the same time and would be able to use multiple IDE toolbars without having to uninstall the toolbars from the framework
